AMENDMENTS TO THE SPECIFICATION:

Please amend the ABSTRACT, as follows:

ABSTRACT

A mobile communication terminal is provided that is capable of shooting a code image, restoring data from the code image, and using the shot code image and the restored data, in response to a request from an application program. A mobile communication terminal (mobile phone) [[20]] includes an image shooting unit [[217]] for shooting an image; a data memory unit [[219]] for memorizing data of a code image shot by the image shooting unit [[217]]; a main control unit [[215]] for controlling the image shooting unit [[217]] and the data memory unit [[219]]; and an application program executing and managing unit [[214]] for executing an application program registered by a user. The main control unit [[215]] controls the image shooting unit [[217]] and the data memory unit [[219]] based on a control request instruction sent from the application program executing and managing unit [[214]] that is executing the application program.
